This note presents some screen shots of the prototype PFIS GUI. There are three levels of control. At the lowest level, the user can manipulate individual actuators. At the mid level, actuators are collected into their respective mechanisms. At the highest level, the user operates PFIS as a scientific instrument.

- **Low-level control of an actuator**
- **Mid-level control of a mechanism**
- **High-level control: Imaging**
- **High-level control: Fabry-Perot imaging**
- **High-level control: Spectroscopy**

**Low-level control**
