Stepper and Servo Motor Drives

MID Series
MID-7604, MID-7602
• Flexible configuration
• High-efficiency, bipolar chopper stepper drives
• User-selectable microstepping and peak current
• Integrated power supply
MID-7654, MID-7652
• Flexible configuration
• High-efficiency servo amplifiers
• User-selectable peak current and continuous current
• Integrated power supply
CE approved and UL recognized

Overview
The National Instruments MID-760x integrated stepper motor power drives and the MID-765x integrated DC-brush servo motor power drives offer reliable, easy-to-connect drive solutions for National Instruments motion controllers. The MID-760x provides stepper motor control from the NI 7334 and 7344 controllers. The MID-765x provides DC-brush servo motor control from NI 7344 controllers. Because the MID-760x and the MID 765x have all the required motion drive and motion I/O signals, they offer all the features of a universal motion interface wiring module with the enhancements of a powered motor drive in a single product. The NI MID power drives connect to motion controller boards through a single-shielded cable that transfers all motor commands, as well as motion I/O control and feedback signals.

The MID-7604 and MID-7602 are 4-axis and 2-axis stepper motor drive units, respectively. The MID-7654 and MID-7652 are 4-axis and 2-axis DC-brush servo motor drive units, respectively.

These compact, well integrated drives incorporate per-axis amplifiers, motor-power DC bus supplies, low-voltage motion I/O supplies, and pluggable screw terminal connectivity in a single rugged metal enclosure. This optimized system wiring design simplifies motion component selection.

Compact Enclosure Size, Flexible Configuration
The MID-760x enclosure is the size of a typical laptop computer, designed to occupy a minimal amount of space. The 765x enclosure is the same length and width as the 760x, but is twice the height. Optional mounting configurations provide 19 in. rack mounting and panel mounting for flexible motion system configuration.

High-Efficiency Architecture
The MID-760x power drives incorporate an efficient bipolar chopper architecture that converts step and direction control signals into winding currents for two-phase stepper motors. The MID-765x power drives incorporate an efficient servo amplifier architecture that converts analog control signals into winding currents for DC-brush motors. The PWM driver technology in the MID-765x accurately controls motor winding current, while reducing motor heating, lowering ripple current, and improving overall motor performance. Active fan cooling provides optimal motion power drive operation.
Stepper and Servo Motor Drives

Output Current Selection
Per-axis peak winding current is switch selectable from 0.2 A/phase to 1.4 A/phase for the MID-760x power drives. You can configure per-axis winding current from 0.8 A to a 5 A continuous and 10 A maximum peak for the MID-765x drives. Output current is carefully regulated to the selected value for efficient and proper motor performance.

Selecting Stepper and Servo Motor Drives
We recommend the National Instruments MID-760x stepper power drives for stepper motors that require less than 1.4 A of current. We also recommend the nuDrive 2SX-411 and 4SX-411 power drives for stepper motors with current rates greater than 1.4 A but less than 4 A peak. For servo power drives, we recommend the MID-765x for motors that require less than 5 A continuous current but greater than 0.8 A continuous.

Signal Conditioning for Motion I/O
The motor control and direction signals are optically isolated for signal integrity and noise immunity. All of the motion I/O limit and home switch inputs incorporate input filtering for noise immunity. Differential encoder wiring is built in to take advantage of the noise immunity inherent in this type of motion system wiring configuration.

Idle Motion Current Reduction
When the step and direction input commands are idle for more than 500 ms, you can configure the MID-760x power drive to reduce output current to a 50 percent current value. Drive current rises to the 100 percent configured value when an active step command input occurs.

nuDrive Stepper Motor Drives
The nuDrive Series are motor drives that interface with motors, encoders, limits, and I/O. A nuDrive contains multi axis drive/amplifiers, power supplies, and motion I/O interface components in a benchtop or 19 in. rack-mount metal enclosure. The nuDrive stepper motor drives have a larger enclosure and can deliver higher current ratings than the MID Series. The next-generation MID Series includes many features that simplify development, such as front panel diagnostic and status LEDs, selectable microstepping for stepper drives, and peak current settings.

Tech Tip
User-Selectable Microstepping
Microstepping provides an electronically controlled step increment with finer resolution than the mechanical full step design of standard stepper motors. The MID-760x Series per-axis configurable microstepping gives you smooth, low-speed operation and enhanced performance.

Stepper and Servo Motor Drives

Host PC Power Monitoring/Shutdown
Designed to enhance PC-based motion system operation, a unique circuit constantly monitors the +5 VDC power from the host PC. Because an unexpected shutdown of the host PC may signal the loss of system control, the MID power drives immediately react to the +5 VDC power loss by disabling motor drive power for instant motor shutdown.

Ordering Information
MID-7604 (4-axis stepper)
- U.S. 120 VAC .................................................777936-01
- Swiss 220 VAC ...............................................777936-02
- Australian 240 VAC ........................................777936-03
- Universal Euro 240 VAC .....................................777936-04
- North American 240 VAC ................................777936-05
- United Kingdom 240 VAC ................................777936-06
- Japan 100 VAC ...............................................777936-07

MID-7602 (2-axis stepper)
- U.S. 120 VAC .................................................778003-01
- Swiss 220 VAC ...............................................778003-02
- Australian 240 VAC ........................................778003-03

Stepper and Servo Motor Drives

Specifications
The specifications below apply only to the MID-7604/7602/7654/7652.
Please refer to your controller specifications to determine overall system specifications.

Some signals have compatibility defined as pass-through. This means the MID 76xx may have passive filtering on these signals, but the signals do not affect the voltage range. Consult your motion controller specifications to determine allowable voltage range and logic level compatibility of the signal.

**MID-7604, MID-7602 Stepper Motor Drives**
- Driver type: IM481H modular hybrid, bipolar chopper
- Chopping operating frequency: 20 kHz
- Motor bus voltage: 24 VDC nominal
- Current per phase: 0.2 to 1.4 A (0.14 to 1 Arms)
  - (factory setting is 0.2 Apeak)
- Microstepping selections: x2, 4, 8, 16, 32, 64, 128, 256, x5, 10, 25, 50, 125, 250

**Power Supply**
- Input voltage: 90-138 VAC/204-264 VAC, 47-63 Hz
- Input fuse: 1.5 A, 240 VAC
- Input fuse dimensions: 5 x 20 mm

**Host Bus Voltage Interlock**
- PC bus host voltage monitoring range: 5 (±5%) VDC
- Dimensions: 30.7 by 25.4 by 4.3 cm (12.1 by 10.0 by 1.7 in.)
- Weight: 4.5 kg (10 lb)

**MID-7654, MID-7652 Servo Motor Drives**
- Driver type: Elmo Motion Control VIO 10/100
- Peak current limit: 1.7 to 10 A (default 1.7 A)
- Continuous current limit: 0.8 to 5 A (default 0.5 A)
- DC-bus motor voltage: 48 VDC nominal
- Continuous power (all axes combined): 320 W

**Power Supply**
- Input voltage: 90-138 VAC/204-264 VAC, 47-63 Hz
- Input fuse: 6 A, 240 VAC
- Input fuse type: 3 A AG

**Host Bus Voltage Interlock**
- PC bus host voltage monitoring range: 5 VDC ±5%
- Dimensions: 30.7 by 25.4 by 8.9 cm (12.1 by 10.0 by 3.5 in.)
- Weight: 10.2 kg (22.5 lb)

**Physical**
- Dimensions: 30.7 by 25.4 by 8.9 cm (12.1 by 10.0 by 3.5 in.)
- Weight: 10.2 kg (22.5 lb)

**Encoder Interface (Each Axis)**
- Inputs: Quadrature, incremental
- Differential input threshold: ±0.3 V (typical)
- Single-ended input threshold: TTL/CMOS
- Noise filter (RC time constant): 100 ns
- Maximum quadrature frequency: 1 MHz

**Inhibit, Limit, and Home Switch Inputs (Each axis)**
- Voltage range: 0 to 12 VDC
- Compatibility: Signal pass-through

**Trigger Input**
- Noise filter (RC time constant): 100 ns
- Maximum frequency: 100 kHz
- Compatibility: Signal pass-through

**Breakpoint Output**
- Compatibility: Signal pass-through

**Analog Input**
- Noise filter (RC time constant): 10 µs
- Maximum frequency: 100 kHz
- Compatibility: Signal pass-through

**Analog Output**
- Compatibility: Signal pass-through

**Safety**
- Installation category II, pollution degree 2

**Environment**
- Operating temperature: 0 to 40 °C
- Storage temperature: -20 to 70 °C
- Humidity: 10% to 90% (noncondensing)
